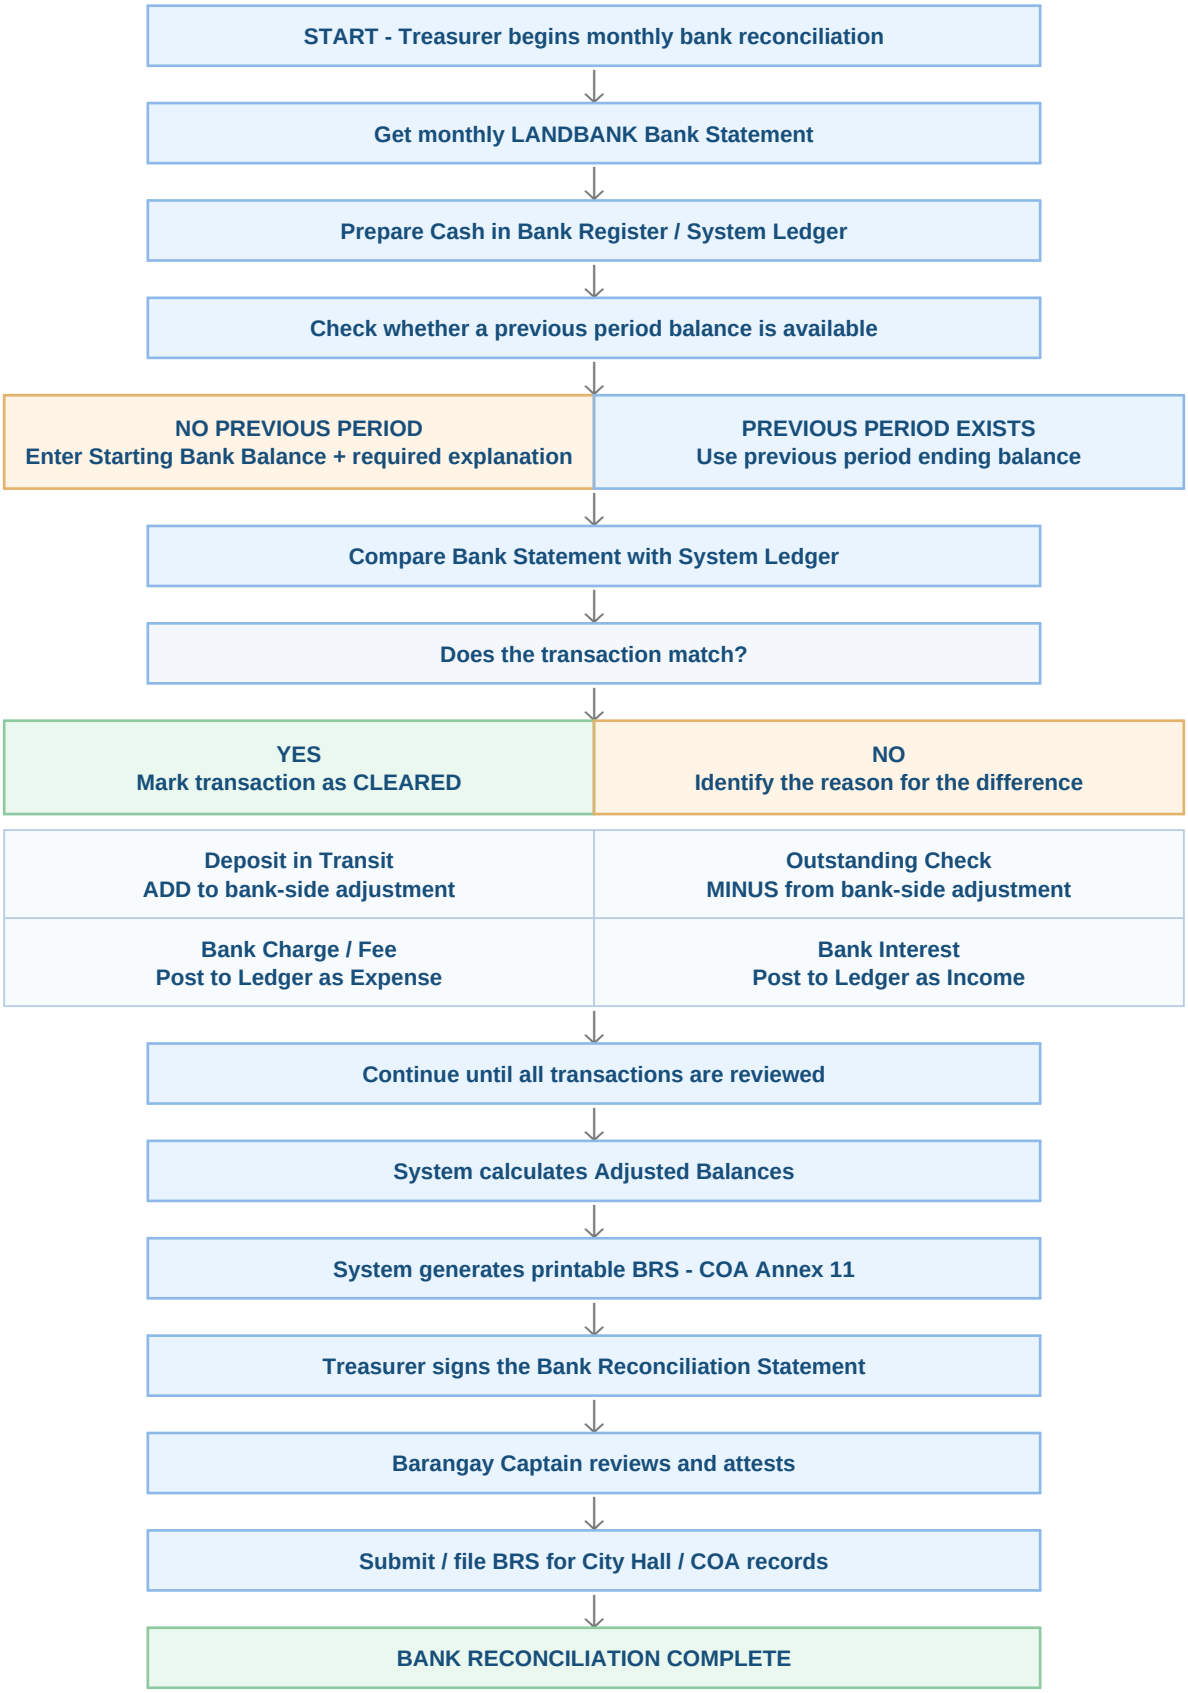
Simple Bank Reconciliation Flowchart

Current monthly reconciliation flow with normal matching and common difference scenarios.



Simple breakdown

1. Treasurer gets the monthly **LANDBANK Bank Statement**.

2. Treasurer prepares the **Cash in Bank Register / system ledger** containing recorded donations and issued checks.

3. The system checks whether there is a **previous period balance**.

4. If this is the **first reconciliation**, Treasurer enters the **Starting Bank Balance** and a required explanation.

5. Treasurer **compares the LANDBANK statement with the system ledger**.

6. If a transaction matches, it is marked **Cleared**.

7. If it does not match, Treasurer identifies the reason.

8. A **Deposit in Transit** is added to the bank-side adjustment.

9. An **Outstanding Check** is deducted from the bank-side adjustment.

10. A **Bank Charge/Fee** is posted to the ledger as an **Expense Entry**.

11. Bank Interest is posted to the ledger as an **Income Entry**.

12. Treasurer continues until **all transactions have been reviewed**.

13. The system calculates the **adjusted balances**.

14. The system generates the printable **Bank Reconciliation Statement (BRS / COA Annex 11)**.

15. The **Barangay Treasurer signs** the BRS.

16. The **Barangay Captain reviews and attests** the BRS.

17. The BRS is **submitted/filed for City Hall or COA records**.

18. Bank reconciliation is complete.

For presentation, the easiest version to remember is:

> **LANDBANK Statement -> Cash Book/Ledger -> Match Transactions -> Handle Differences -> Adjust Balances -> Generate BRS -> Treasurer Signs -> Captain Attests -> Complete**
